The prior art fails to teach and render obvious the features as claimed in independent claims 1,8,10:

Claim 1:

"a) periodically monitoring said mutual help channel of the first system with a control logical channel having timeslots with a second periodicity which is not proportional to said first periodicity, while, taking into account the characteristics of the radio interface of the first system; and

b) in case of detection, by the base station, of the given pattern transmitted by the mobile terminal on said mutual help channel, allocating a traffic channel emulating the radio interface of the first system, for communication with the mobile terminal."

Claim 8:

"a) means for periodically monitoring said mutual help channel of the first system with a control logical channel having timeslots with a second periodicity which is not proportional to said first periodicity, while

taking into account the characteristics of the radio interface of the first system; and

b) means for allocating a traffic channel emulating the radio interface of the first system, for communication with the mobile terminal in case of detection of a given pattern transmitted by the mobile terminal on said mutual help channel."

Claim 10:

"a) means for periodically monitoring said mutual help channel of the other system with a control logical channel having timeslots with a second periodicity which is not proportional to, said first periodicity, while taking into account the .characteristics of the radio interface of the first system; and

b) means for allocating a traffic channel emulating the radio interface of the other system, for communication with the mobile terminal in case of detection of a given pattern transmitted by the mobile terminal on said mutual help channel."
